QINGFEI TECH TALENT TEAM

Qiming Program

（启明计划）

Program information and preliminary collaboration overview

Program overview

The Qiming Program is a national-level talent and innovation program led by China’s Ministry of Industry and Information Technology (MIIT) and implemented locally through government talent offices.

Collaboration tracks

1. Innovative Talent Scheme
Senior international experts cooperate with a matched Chinese company as research or technical advisors. Projects normally last two to three years. Experts may retain their current positions, work mainly remotely, and visit China once or twice per year when necessary.

2. Entrepreneurial Talent Scheme
Experts interested in commercializing their research may establish or participate in a technology venture in China. Remote involvement may also be possible.

Eligibility criteria

All applicants: A completed doctoral degree and at least three years of work experience after obtaining the doctorate are required.

University academics: Applicants **aged 40 or above** must hold an academic rank of associate professor or higher. The academic-rank requirement may be relaxed for applicants **under 40**.

Company employees: Applicants must hold a mid-level or senior position. No academic rank is required.

Potential cooperation partners

Cooperation primarily focuses on companies seeking to strengthen their market competitiveness. Opportunities with universities and research institutions are relatively limited and require a close match between the expert's background and their specific research needs.

How cooperation is arranged

Collaboration model

After a suitable company is identified and the application is approved, the cooperation agreement is normally signed directly between the expert and the matched company. Qingfei assists with company matching, application preparation, communication, and administrative coordination.

Responsibilities

These may include technical guidance, research advice, data-analysis solutions, product development, technology commercialization, or support in solving specific industrial problems.

Time commitment

A typical cooperation period is two to three years. The precise weekly or monthly workload is flexible and negotiated with the company. Relocation is generally not required.

Intellectual property

Sharing information during the preliminary matching and application stage does not transfer any intellectual property rights. Ownership of results, publication rights, confidentiality, and commercialization arrangements will be defined in the future written agreement between the expert and the partner company.

Funding and remuneration

Successful applicants may receive approximately **RMB 3-5 million in total government funding**, comprising the personal subsidy and project funding below.

1. Personal subsidy: RMB 1 million
Government funding allocated to the expert as a personal subsidy.

2. Project funding: RMB 2-4 million
The remaining government funding supports the approved project. Its allocation requires detailed discussion with the partner company. In most cases, **one-third to one-half (1/3-1/2)** of this project funding may be allocated to the expert as a project-related subsidy, subject to the agreed allocation and applicable funding rules.

3. Company remuneration: agreed separately
Personal remuneration is provided separately by the partner company under the contract. The amount, payment method, milestones, and schedule are agreed in the written contract before any commitment is made.

Current stage and next steps

At the current stage, no formal commitment is required. We will first review your background, identify suitable companies, and develop a preliminary cooperation direction. Once a potential match is found, we will provide the company's profile, website, location, proposed technical work, and anticipated cooperation terms for your review before proceeding with the formal application.

> **Important note:** This document is a preliminary overview prepared by Qingfei Tech Talent Team. It is not an official government policy document, application notice, or contractual offer. Any cooperation, funding, remuneration, intellectual-property, and confidentiality terms are subject to applicable rules and the final written agreement with the relevant company.
